LACING RINGS

Positioned at any available hole, cables are bunched and tied together. Rings provide support at the point where wires branch off to equipment.

CABLE TRAYS

Providing a traceable wire management system. These trays are available in 100mm and 150mm widths and are finished in black powder coat. The unique design of the side fold ensures no cables are vulnerable to wear from sharp edges, this feature also allows for cable trays to be joined together to create larger widths where needed. All mounting widths commencing at 100mm and rising in increments of 50mm can be achieved.

The design allows the use of Velcro® strips as well as cable ties. Each alternative cluster of cable tie punchings alternate with vertical slots to suit the Velcro® strips.
