

# OUTDOOR HOUSINGS

Outdoor Housings provide primary protection to inner industrial style cabinets from direct solar heat, dust, driving rain, vandals and vermin.

Installed in exposed or remote areas, the housing is fitted with hinged, pad lockable doors and/or fixed panels. The frame is fully welded tube with a galvanised finish. The housing panels can be galvanised zinc seal steel, with a powder coat finish, or stainless steel 316. Whilst the frame is totally secure, airflow is unrestricted between the housing and the inner Industrials ensuring heat transfer is minimised. Provision also for fitting air conditioning units to the inner industrial cabinets to keep internal electronics cool.
